## What's New In?

Feedback and printable comments can be integrated into existing drawings with the new Markup Import tool. Based on feedback, it will not only update your existing drawings but also generate the changes directly into the drawing. (video: 1:13 min.) Markup Assist simplifies the annotation process by showing you which functions and features are available in the different drawing types. No more manual clicks. (video: 0:55 min.) Simplified import of the vector (SVG) and AutoLISP drawing formats. No more manually copying the data into your drawings (video: 1:02 min.) The toolbox of the second version of the AutoLISP format has been significantly expanded, including the new: Markup Assist: Import vector data directly from AutoCAD and quickly add them to your drawings. You no longer have to manually copy the data. (video: 0:50 min.) AutoMate: Scrape data from webpages directly into your drawings, without additional editing steps. (video: 1:04 min.) The Web Data Exchange tool (WDX) has been enhanced. For example, it now takes several HTML and CSS filters into account, which results in more accurate and faster data delivery. Additionally, you can use the new Web Export (WX) tool to publish WDX data directly into a web browser. (video: 1:50 min.) Freehand-Drawing Enhancements: Directly import and edit freehand drawings. In the Drawings section of the user interface, it is now possible to open your own drawings as freehand. Furthermore, this also works for AutoCAD shapes. (video: 1:25 min.) The modified Freehand tool can take any kind of freehand drawing, such as hand-drawn symbols, templates or sketches, and export them directly into your drawings. The tool can also import these drawings into the Freehand tool, where they can be edited and reused. (video: 0:48 min.) Paint commands can now be used for digitizing any region. To digitize the region, you can use a standard paintbrush tool (including the brush size and pressure settings) and select the new Digitize option. The tool automatically converts the geometry into polyline segments. (video: 1:05 min.) The digitized region can then be manipulated in the Freehand tool.
